ignite the fire  
within

# INTRODUCTION

Brandt BRV (PTY) LTD is a privately owned proudly South African motor vehicle manufacturer, designing and manufacturing tough and reliable pick-up trucks. Built to handle any road conditions and with great off-road capability, these vehicles are the ideal option for those who need a dependant workhorse through to the thrill seeking adventure enthusiast. The factory is based in Bloemfontein, Free State. Currently consisting of only 25 employees, the team aims to deliver 20 vehicles per month in the current premises of only 2000 square meters. Constructed from mostly 1.6mm steel, you can expect a vehicle as robust as they get!

# MISSION

- Our main goal – To build and supply the market with the best, toughest, meanest, most reliable, most rugged and most radical vehicle possible.
- We believe in going back to the basics in the manner in which we build our vehicles resulting in our vehicles lasting longer with very low maintenance and running costs.
- We strive to pair with only the best suppliers, and to use only the best parts and equipment so that we can deliver an outstanding end product.
- With more and more utility vehicles being sold each year in the South African market alone, it's not difficult to see where we aim to penetrate and dominate. Fulfilling the demand in South Africa isn't where the dream ends but rather where the journey starts in globalising our product in the international markets.
- By growing our business we also play a positive role in job creation and improving the economy with locally manufactured products as this is a major challenge in South Africa. We aim to employ young individuals who are willing to learn as the company progresses to finally specialise in their required fields and move into management positions where possible.

# OUR VISION

Our vision as a team is to design, manufacture and sell the best quality and value for money vehicle that suits the needs of the market.

Team work is a very important factor as well as a good support system. We don't settle for less than being the best in what we do.

Faith, honesty, respect, hard work and loyalty are the pillars of our success.

We strive to build the company to such an extent that our generations to come can carry forward the legacy of Brandt BRV with the same passion and pride as we do.

# WHERE IT ALL BEGAN

Antonie and Marietjie Brandt started in the trade back in 2001 where sons Lourens, Stian and Gerrit Brandt were all still growing up.

Today they work as a unit to grow the company each in their own respective roles with Stian and Antonie together with Trevor Williams as company Directors leading the team towards great success.

2004	Antonie Brandt founded the first South African manufactured motor vehicle known as the DTV Roadrunner, which was SABS certified.
2010	A facelift model of the DTV Roadrunner 2N was launched
2012	The DTV Roadrunner was discontinued as the market depleted. More than 400 vehicles had been manufactured
2013	In 2013 Brandt R&D was established with Stian Brandt and Antonie as the front runners. Where a lot of research and development was put in, in order to manufacture the first of the new generation vehicles – Bigger, better and even more radical!
2016	Brandt BRV (PTY) LTD is officially established as we are known today. ( <a href="http://www.brandtbrv.co.za">www.brandtbrv.co.za</a> )

# THE TIME LINE

# THE BRANDT BRV PRODUCT RANGE

Our vehicles range from a single cab to extended cab, from a workhorse to sport models and to top it off with a safari game viewer as well.

# THE MANUFACTURING PROCESS

# THE BODY SHOP

Most of the actual building of the motor vehicle is manually hands on rather than robotic.

We manufacture our own monocoque (integrated) body/chassis from 3mm – 10mm steel and the body work all round from 1.2mm – 1.6mm steel. All the vehicles are also strengthened with a integrated roll cage. Our vehicles don't have crumple zones and can handle a lot more than the competing market.

Our own leading arm suspension (front) and coil spring suspension (rear) makes for a smooth drive on any terrain. Whether you're in the dunes, on tarmac or a heavily corrugated road, a BRV will continue to surprise even with the potholes we find so often.

# THE PAINT SHOP

- All paint work is done on premises before heading through to the assembly division.
- Every vehicle is thoroughly treated for rust protection.

# THE ASSEMBLY LINE

The assembly line consists of pre-assembly, upholstery, wiring and final-assembly.

Each vehicle is assembled by hand with top quality products and equipment..

You won't find much plastic in our vehicles as most of the interior panels are also steel covered in our selected material.

The assembly is the most time consuming and toughest process as everything needs to be fitted to precision by skilled hands and thoroughly tested before delivery of each vehicle.

# THE BRANDT BRV PRICING

	<u>PRICING FROM (INCL VAT)</u>
S89-M3 BASE SINGLE 2X4	R 392 900
S89-M3 BASE SINGLE 4X4	R 418 900
